

SMART CONTRACT RECOGNITION DECISION

Dated 6th October 2026

Pursuant to Article 24 of the Statutes of the Capital Markets and Technology Association (the "**CMTA**"), dated 23 June 2021, and Sections 5.2 and 5.3 of the CMTA's Organizational Regulations of 24 November 2021, the undersigned, acting as Chair of the Expert Committee of the CMTA, confirms the following on behalf of the Expert Committee and issues the following smart contract recognition decision (the "**Recognition Decision**"):

1. A delegation of the Expert Committee was appointed by its Chair to review the request submitted by the Cardano Foundation for the recognition of its CIP-113 Programmable Asset Token smart contract (commit 36cc71b677ccc7c98fd8d83cf1f83072055baf63 of <https://github.com/cardano-foundation/cpt-rwa-ch-de-cmta-reference>) (the "**Reviewed Smart Contract**") as a smart contract recognized by the CMTA (a "**Recognized Smart Contract**") within the meaning of:
 - (i) the CMTA Standard for the Tokenization of Equity Securities Using the Distributed Ledger Technology (the "**Equity Standard**");
 - (ii) the CMTA Tokenized Shares Certification Mark Regulations (the "**Tokenized Shares Certification Mark Regulations**"); and
 - (iii) the CMTAT Framework: Blockchain agnostic functional specifications of the CMTA Token for the tokenization of financial instruments updated in June 2026 (the "**CMTAT Framework**").
2. The delegation has reviewed the following materials:
 - (i) the documented code of the Reviewed Smart Contract, as made publicly available at commit 36cc71b677ccc7c98fd8d83cf1f83072055baf63 of <https://github.com/cardano-foundation/cpt-rwa-ch-de-cmta-reference>, as submitted, it being noted that:
 - (i) its compiled scripts contained in the file plutus.json (SHA-256: 3ecc70618ab360795425b42be98fdf394100b33154336a1bea0c337e69f8c48e) built with Aiken v1.1.23 (commit 8949565a9969278846ffefe30bc3b892029dd318) for Plutus V3, with dependency versions locked in the repository's aiken.lock.

- (ii) Release 1.0.0 (commit af153094c1222ca2fa956676540d0e4b1a002806) changes only the README, so its scripts are identical and it is therefore also covered by this Recognition Decision;
 - (ii) the independent security audit report dated 22 September 2026, version 0.1.0, prepared by No Witness Labs, available at <https://github.com/cardano-foundation/cpt-rwa-ch-de-cmta-reference/blob/36cc71b677ccc7c98fd8d83cf1f83072055baf63/documents/audit/2026-09-22-cip-113-1st-module-audit-report.pdf>, which audited commit 06a8059d21c70624b694a73dcf54d566d9b79695 and verified the fixes at commit f454505dabaf0e09b33af9293e9ba6f761bfa0fa, and whose compiled scripts are identical to those of the Reviewed Smart Contract (the "**Audit Report**");
 - (iii) the pre-assessment of the equivalency criteria (CMTA/CMTAT-Cardano, version 0.2.0, commit ab8d303d98509ca5dd1a014c8ddec68a3de2562b), which assessed commit ff5624e4a01942bbb14aa1830110d93092819988 against version 0.2.0 of the criteria and is available at <https://github.com/CMTA/CMTAT-Cardano/blob/ab8d303d98509ca5dd1a014c8ddec68a3de2562b/README-cpt-rwa-ch-de-cmta-reference.md> (the "**Pre-Assessment**"); and
 - (iv) such other information and documentation as the delegation considered necessary for the purpose of its review.
- 3. This Recognition Decision does not extend to the CIP-113 Base Layer (cardano-foundation/cip113-programmable-tokens) (the "Base Layer"), which was excluded from the scope of the Audit Report. The Audit Report's analysis cites Base Layer commit 9db7e0629a1509cc9d41d069f0ef0ed251601173. The Base Layer was audited separately by No Witness Labs (reports of 10 August and 24 September 2026, available at <https://github.com/cardano-foundation/cip113-programmable-tokens/tree/369e8c280609208b388c77937dc3a18e02561b0a/documentation/audit>); the second audited that commit and verified the fixes at commit 6b75ba3286b4692ca23059ff51285db357fb09c6, released as v0.0.1.
- 4. The Expert Committee notes that the CIP-113 Base Layer's core upgrade authority is a trusted role able to redefine the validation logic of every programmable token, including tokens already issued. It is currently held under a limited multi-signature arrangement. The Expert Committee understands from the Cardano Foundation that this arrangement reflects the current state and not the final state, and that the Cardano Foundation has begun defining a more comprehensive governance structure, including possible gating of upgrades by native Cardano governance. This Recognition Decision is given on the basis of, and does not constitute an

endorsement of, the current upgrade authority arrangement. Issuers should take it into account in their own risk assessment and disclosures.

5. Having considered the above, the members of the delegation have unanimously determined that the Reviewed Smart Contract (a) includes the features required by Appendix 2 of the Equity Standard and the mandatory functionalities of the CMTAT Framework, and (b) does not include functions that contradict the Equity Standard, and that it may accordingly be used in lieu of the CMTAT reference implementation for the purposes of the CMTA's certification schemes.
6. The Expert Committee hereby recognizes the Reviewed Smart Contract as a Recognized Smart Contract for the purposes of the Equity Standard and the Tokenized Shares Certification Mark Regulations subject to the condition that each deployment includes:
 - (i) a reference to, or a hash of, the tokenization terms, recorded on chain;
 - (ii) decimals, published as zero in the token's metadata;
 - (iii) a metadata token carrying the name and ticker symbol of the token and
 - (iv) a record, alongside its deployment parameters, of the Base Layer commit against which the Reviewed Smart Contract's reliance on the Base Layer was checked.

Provided that the elements listed in (i) to (iv) above are included at deployment, issuers using the Reviewed Smart Contract for the tokenization of equity securities may accordingly refer to it as a smart contract "recognized by the CMTA" in the context of applications for the right to use the CMTA Tokenized Shares certification mark, subject to compliance with the other requirements and recommendations set forth in the Equity Standard and the Tokenized Shares Certification Mark Regulations. For the avoidance of doubt, this Recognition Decision does not extend to the CMTA Tokenized Debt certification scheme.

7. This Recognition Decision takes effect as of the date hereof. It remains valid for so long as:
 - (i) the Reviewed Smart Contract is not materially modified without the prior approval of the Expert Committee, and the Base Layer used by any deployment is not materially modified in a manner that affects the functioning of the Reviewed Smart Contract;

- (ii) no change in the applicable legal or regulatory framework renders the Reviewed Smart Contract incompatible with the requirements of the Equity Standard or the Tokenized Shares Certification Mark Regulations.

The Expert Committee reserves the right to withdraw this recognition at any time if any of the conditions set forth above ceases to be met.

- 8. This Recognition Decision does not constitute, or substitute for, any regulatory approval that may be required for shares tokenized using the Reviewed Smart Contract. Issuers remain solely responsible for ensuring that their tokenized shares and related processes comply with all applicable legal and regulatory requirements.

For the Expert Committee:
